(C) Final Conversation Graph (Backbone)

(D) DeTox-Fed Framework

Keep
Statistically Significant Edges

nodes: the conversation trees

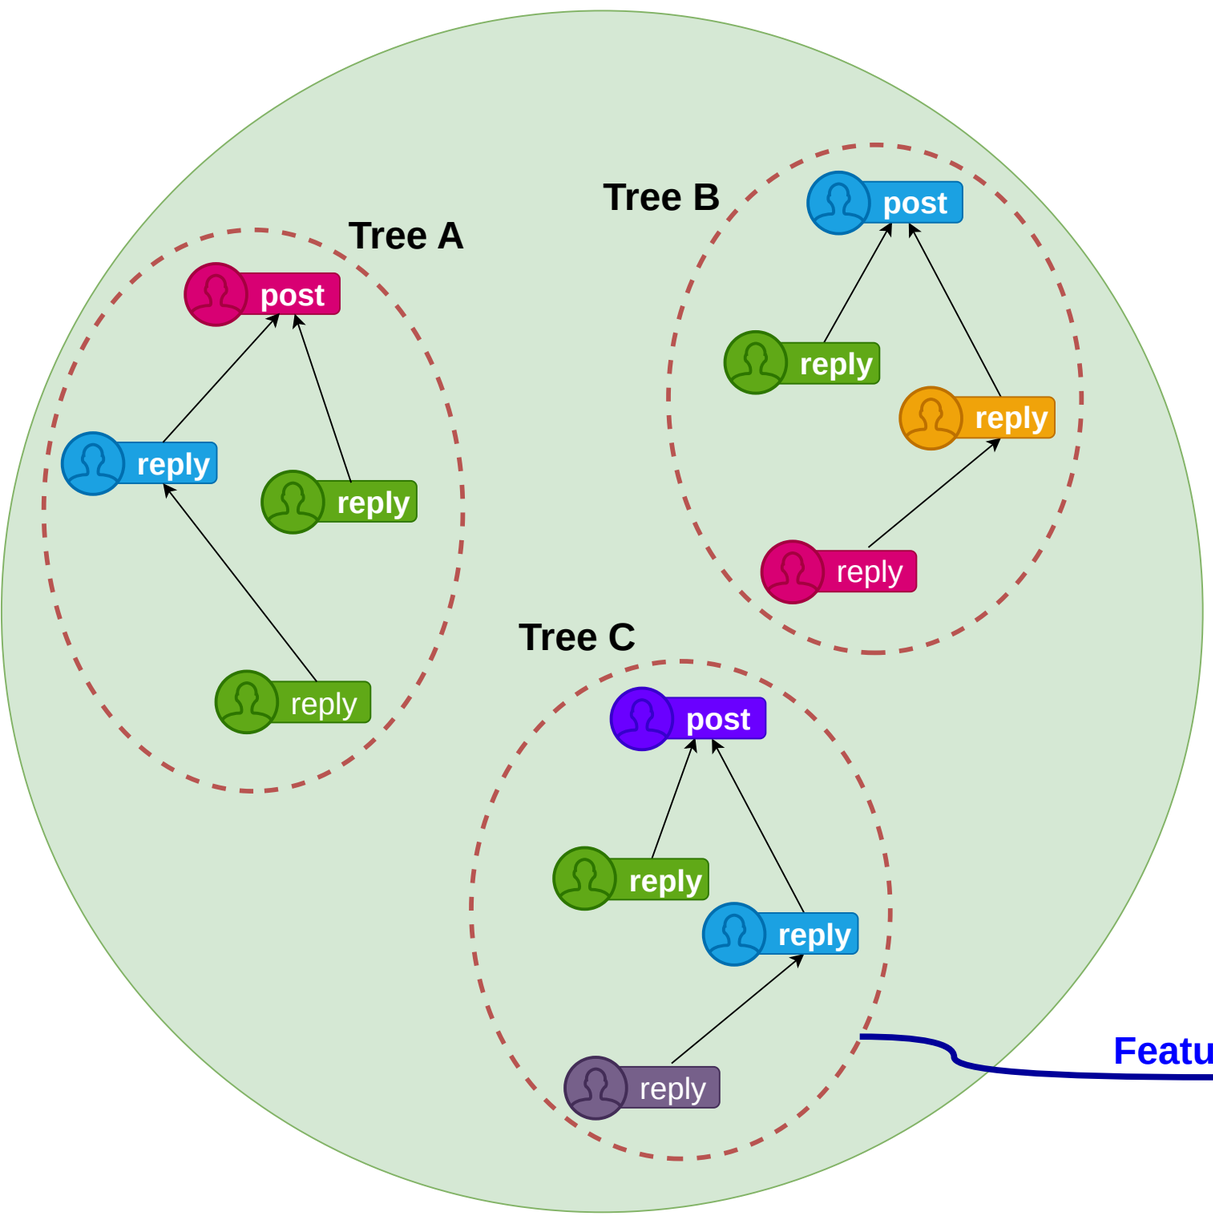

a conversation originates in **one** DSN instance, but can be found in multiple instances due to federation

intra edges: between conversations in the same DSN instance

inter edges: between conversations in different instances

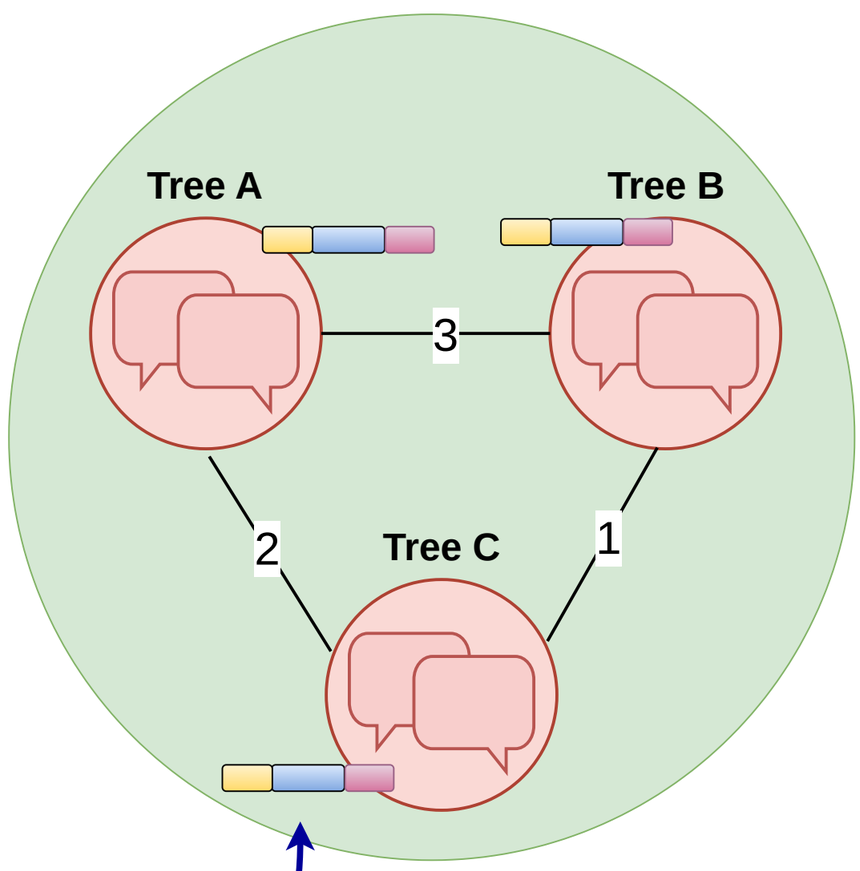

Local GNN model

(A) Raw Data: Conversation Trees

Construct
Conversation Graph
per
DSN instance

(B) Initial Conversation Graph

Feature Vector

Pooling

DeepWalk Embedding	#Followers, #Followees, #posts	sentiment analysis of posts & replies	...
Tree-related	User-related	Text-related
